First Lego Robotics Competition

On Sunday, January 22nd the Center Moriches Seagulls competed in the First Lego Robotics competition at Central Islip. This year the mission was titled Animal Allies and teams all over Long Island were given several missions requiring the programming of a Mindstorm Lego Robot and a playing board. Teams played against each other in 3 rounds and in a final alliance round they were partnered with another Long Island team to compete against other paired teams. Other components to this all day event entailed a special presentation to a group of judges on an innovative idea to save a chosen animal. Although the team did not make it to the next round, the Clayton Huey Seagulls won the first place innovation award for their creative mousetrap idea. Besides the Innovation award (pictured) the team also scored first place in the Alliance round when they partnered with the Seaford Sea Lions. They two teams scored the highest points when placed together and showed everyone what true teamwork looks like.

Congratulations to the Center Moriches Seagulls. The community, parents, and coaches are proud of your hard work and accomplishments! Can't wait to see what you do next year!
